

**h3-Open-UTIL/MP:
a general-purpose coupling library
bridging legacy HPC applications and the future**

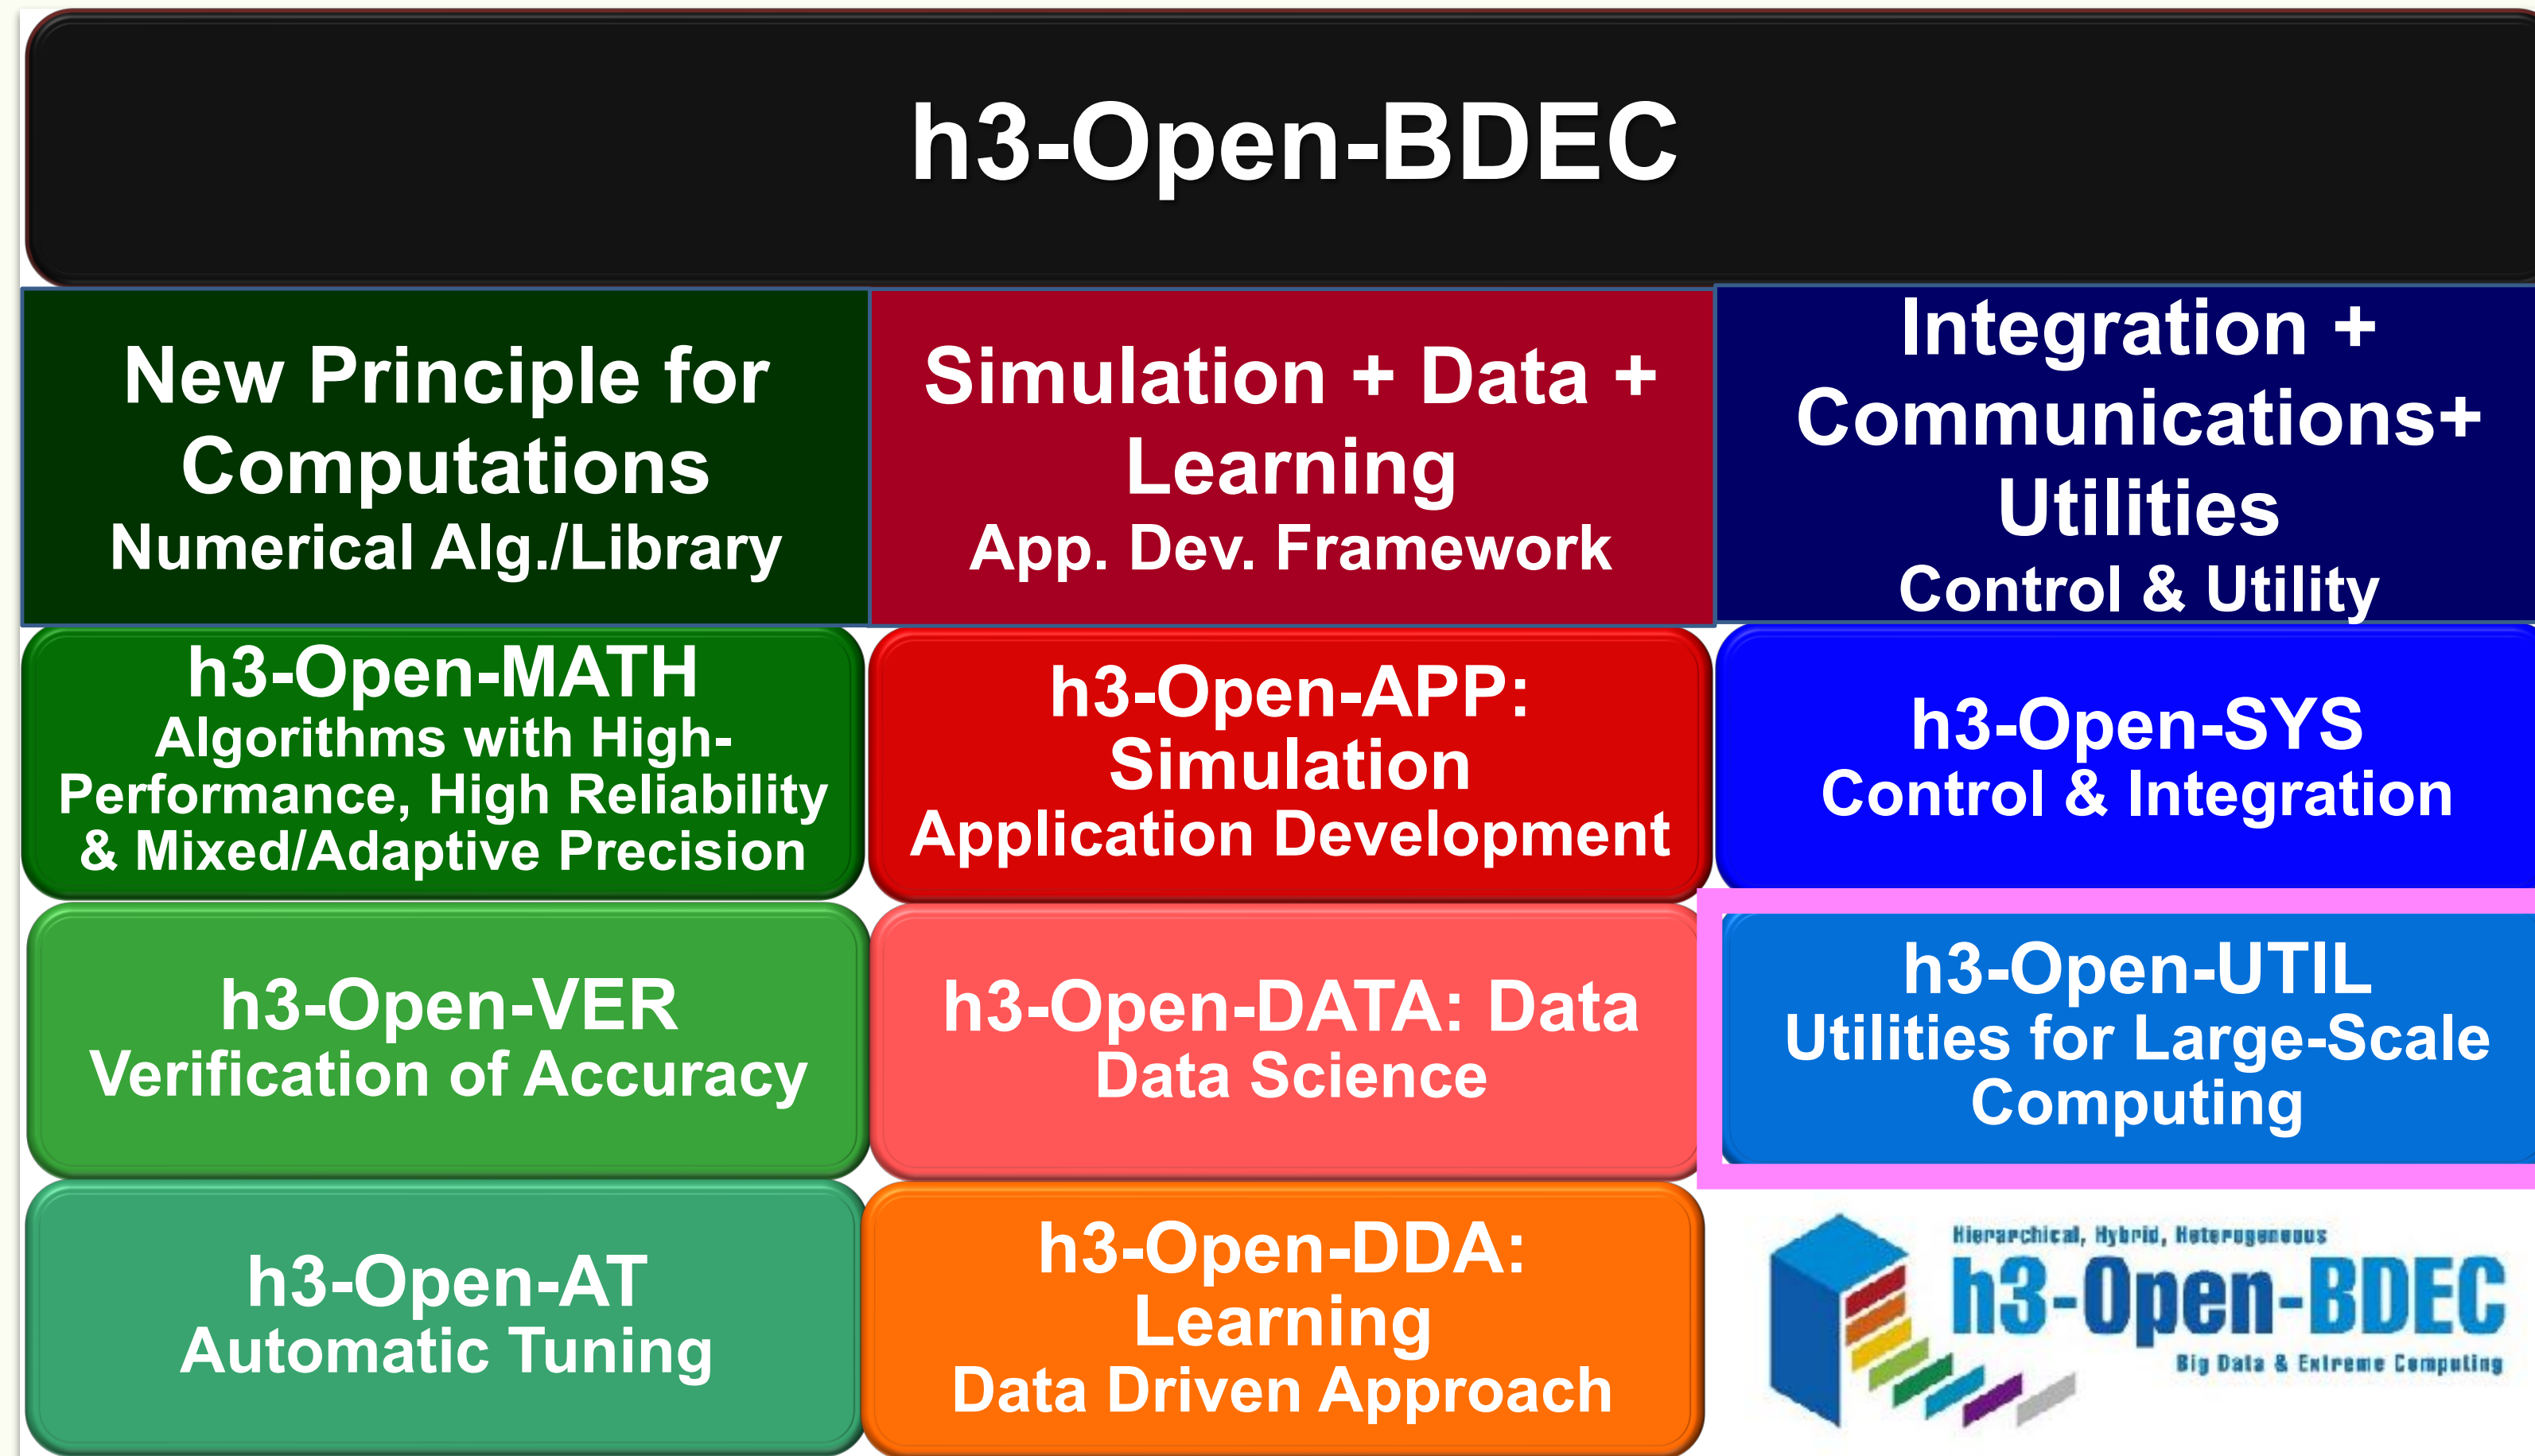

Hisashi YASHIRO (National Institute for Environmental Studies)

with

Takashi Arakawa(RIST), Shinji Sumimoto (Fujitsu), Kengo Nakajima (U-Tokyo), and h3-Open-BDEC team

Towards Society 5.0 by h3-Open-BDEC
2021/12/3

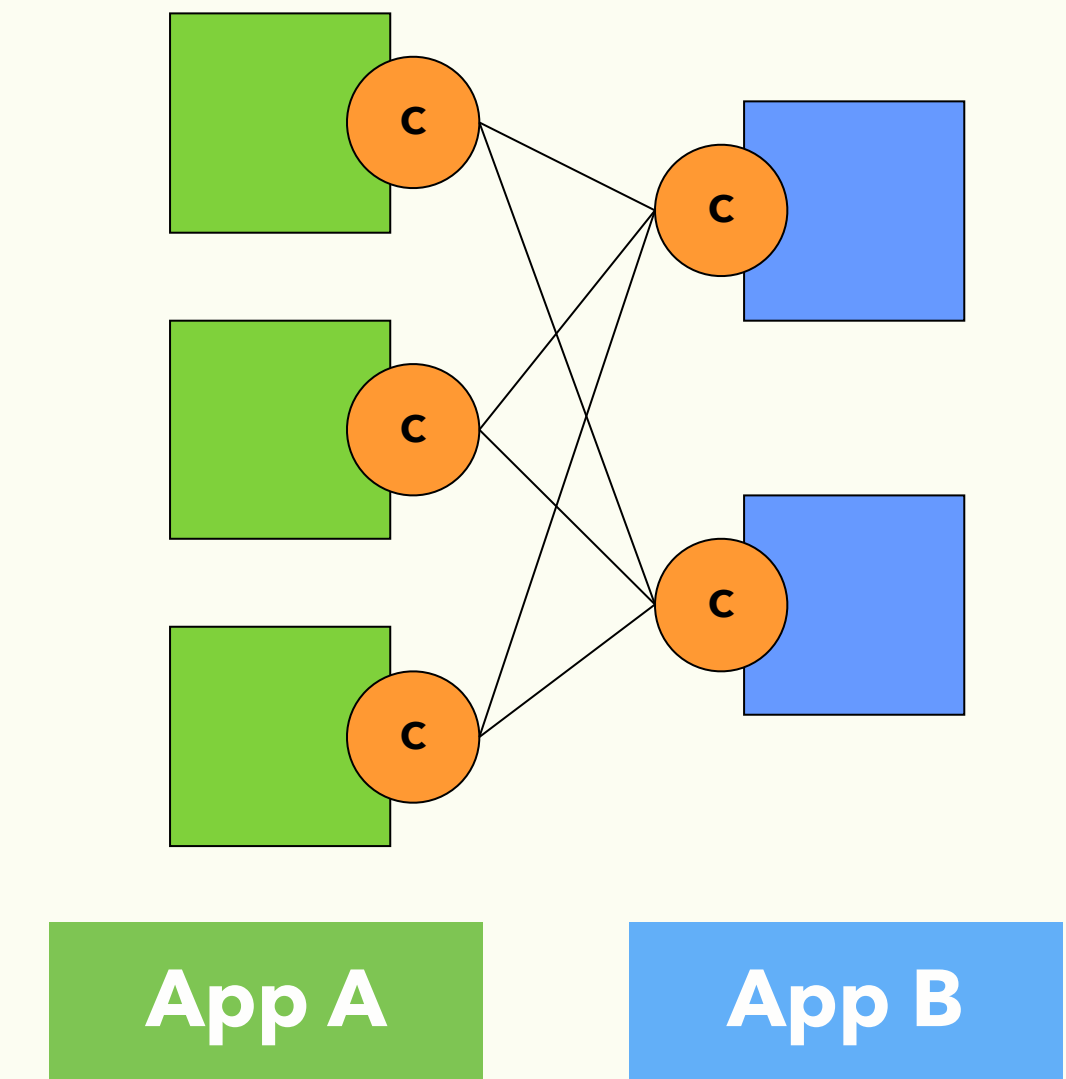

h3-Open-UTIL: Utilities for Large-Scale Computing

h3-Open-UTIL/MP: A general purpose coupling library

It manages...

- Process groups: MPI communicator
- Data exchange rules
 - Process communication
 - Timing in the time integration of simulation
 - Spatial remapping between the different grid systems

What can we do with h3-Open-UTIL/MP?

Multi Physics Coupling

Atmospheric model (NICAM)

- Developed by Meteorologist
- 20-years development
- 200k lines of Fortran code
- Icosahedral grid system
- 100-10000 processes

Coupling

Ocean model (COCO)

- Developed by Oceanographer
- 20-years development
- 200k lines of Fortran code
- Tri-polar grid system
- 100-1000 processes

Picture from Miyakawa et al., 2017, GRL

A practical case: Atmospheric model NICAM

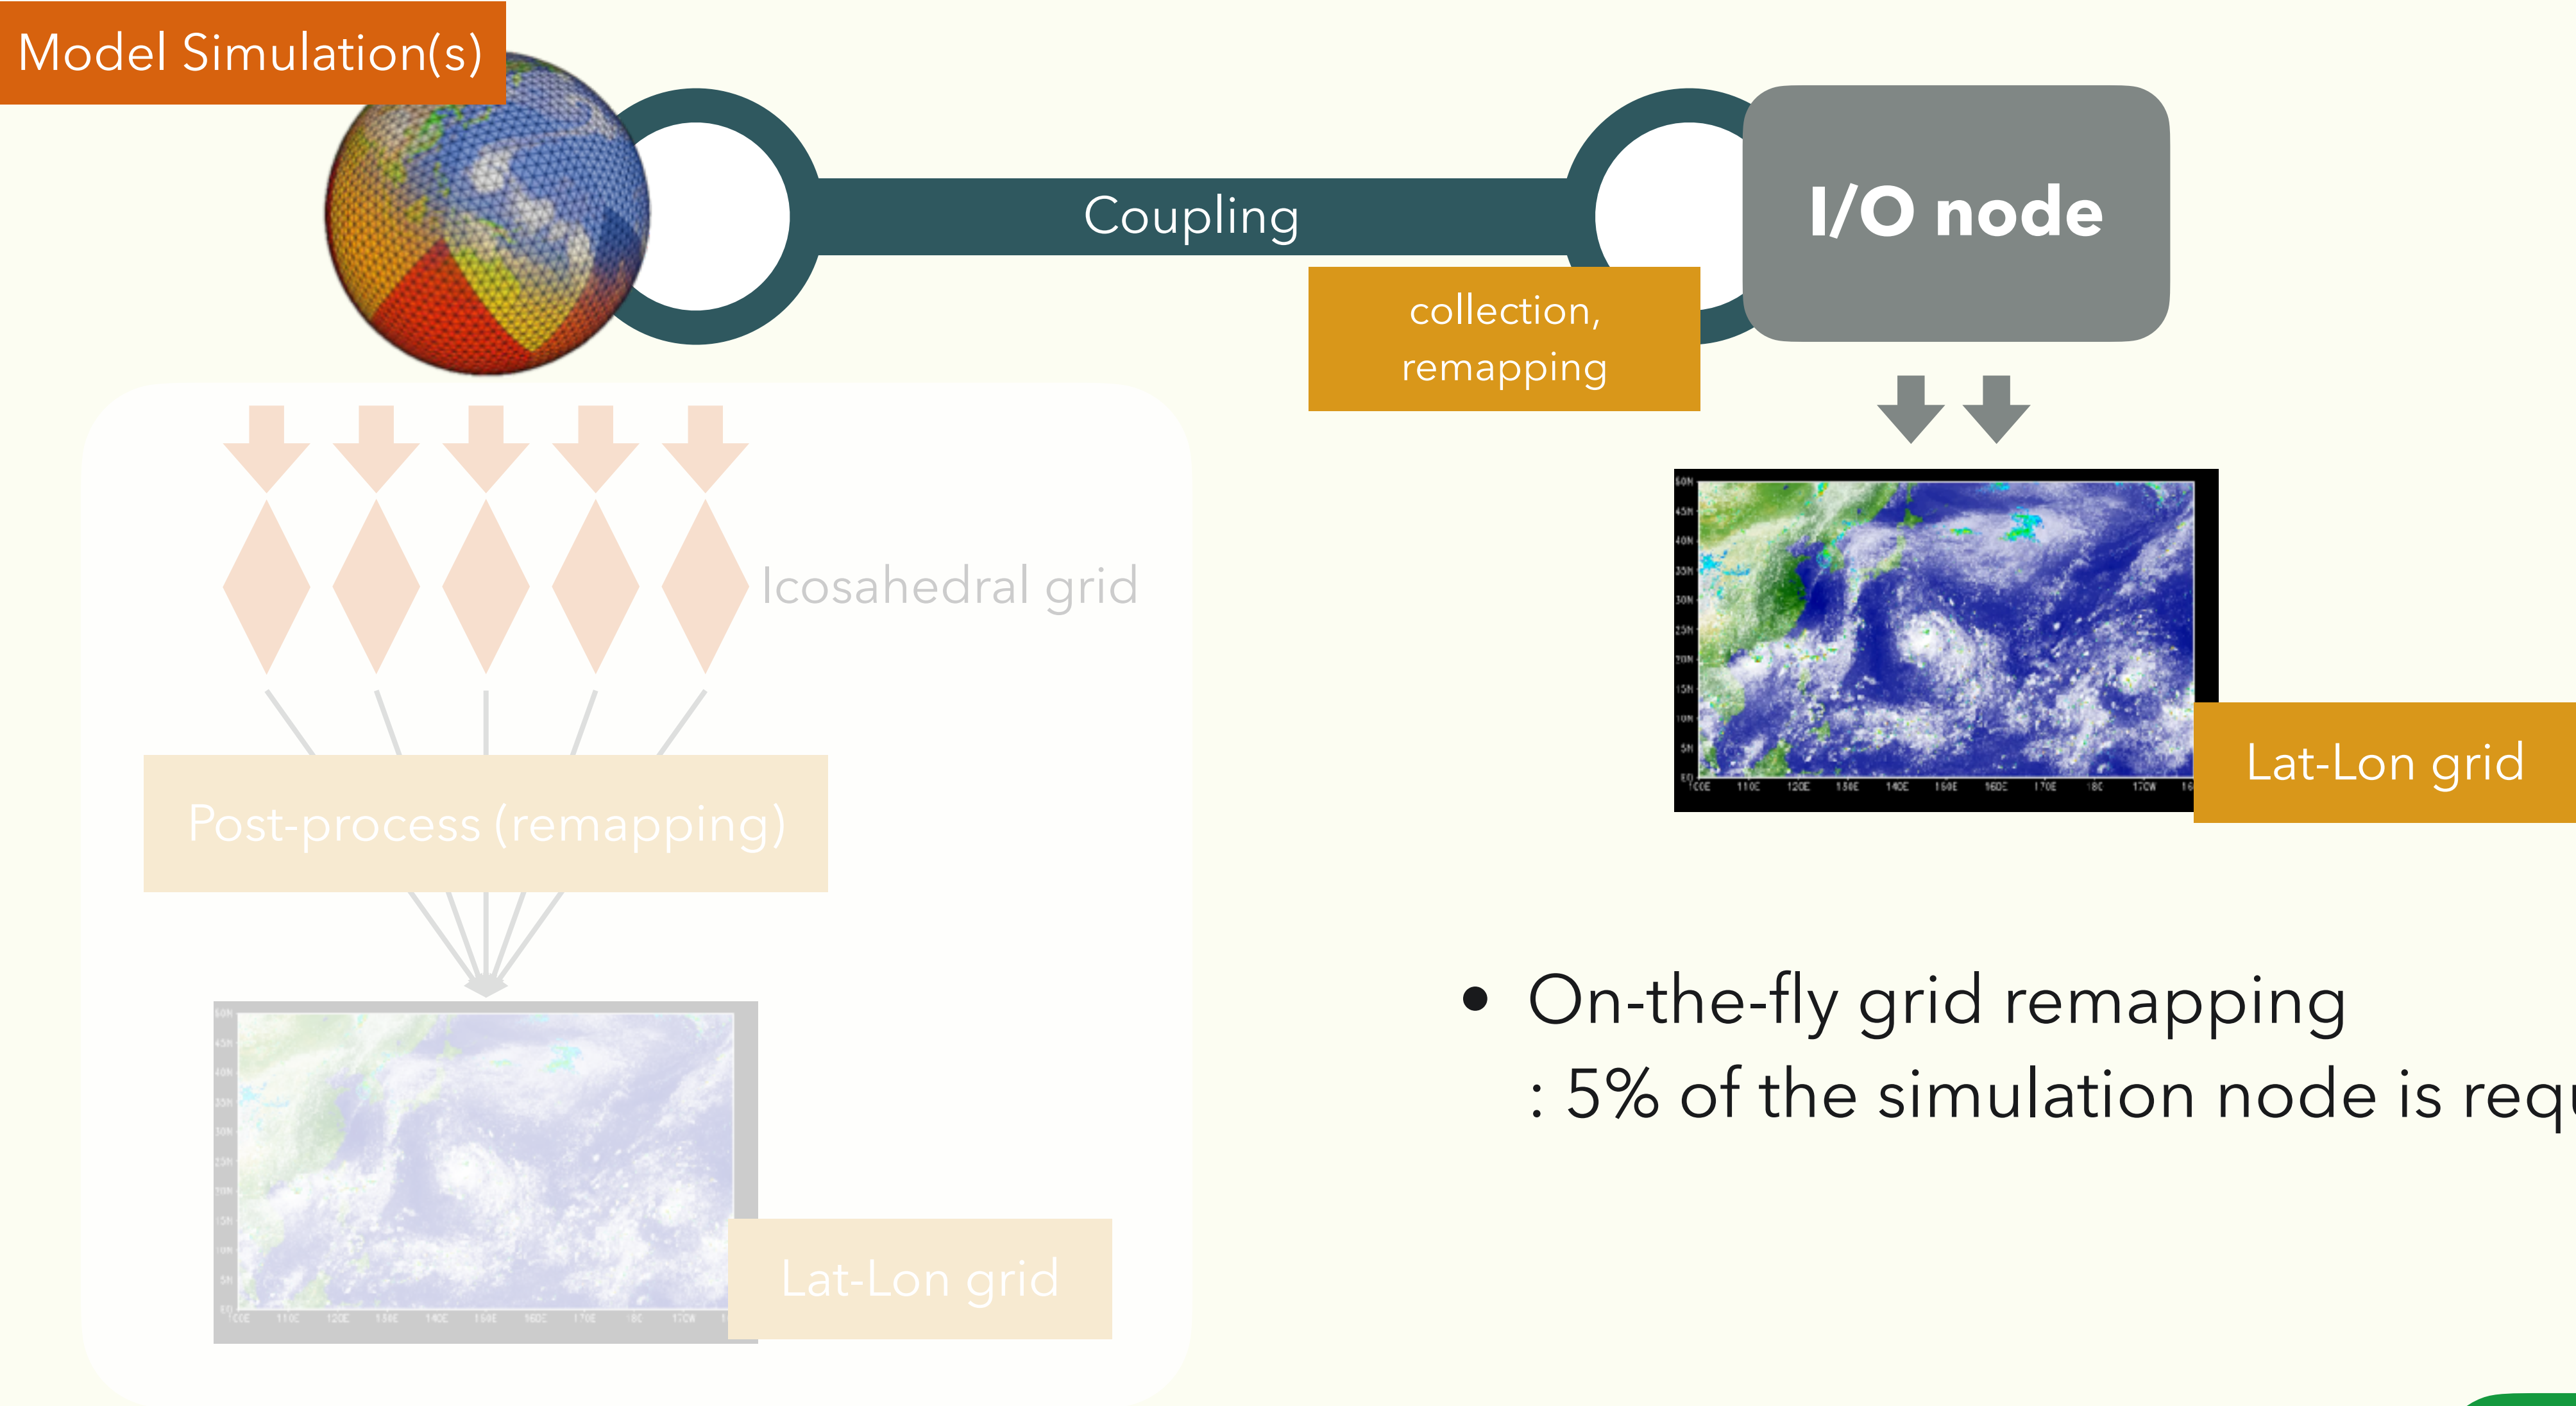

Atmospheric model
(NICAM)

- h3-Open-UTIL/MP is a general purpose coupling library : not only for climate applications

I/O Node Coupling

- On-the-fly grid remapping : 5% of the simulation node is required

Multi Detailed-level Coupling

Low detailed level

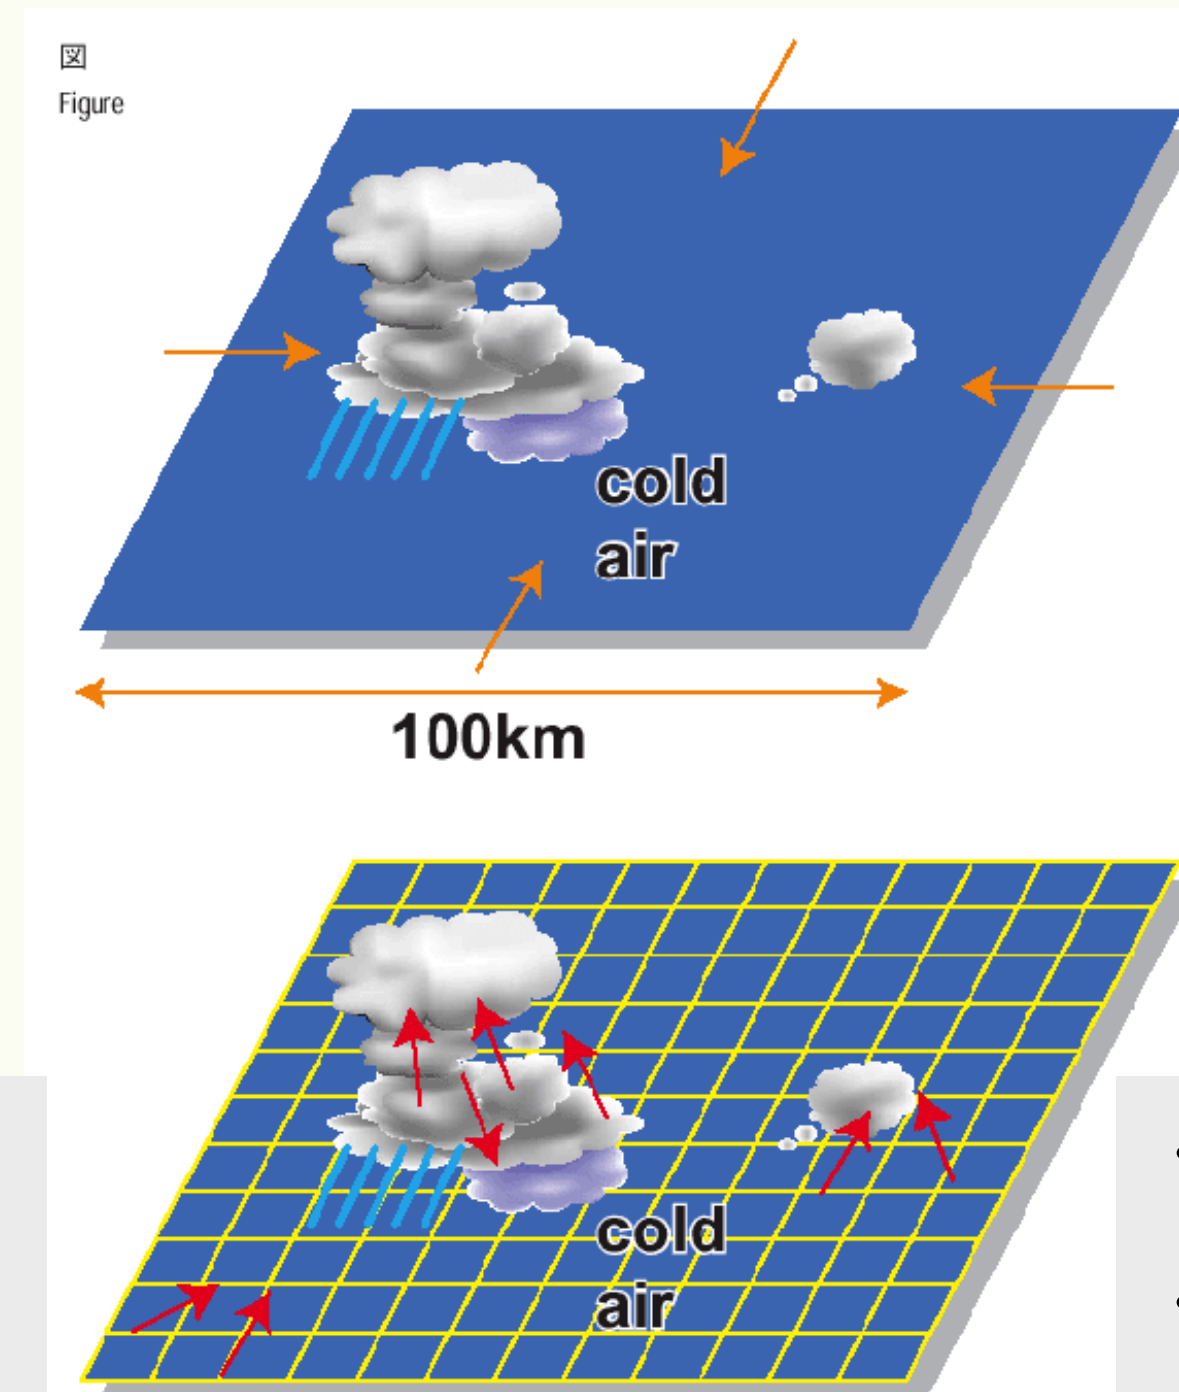

High detailed level

The process components (solvers) are resolution-dependent

Low-resolution
Atmospheric model

High-resolution
Atmospheric model

- Clouds and convections are parameterized
- Poor to reproduce heavy rainfall
- Climatology is well-tuned to the real world
- Light workload

- Clouds and convections are solved more explicitly
- Reproduce detailed meteorological phenomena
- There is non-negligible climatological biases
- Heavy workload (more than x1000!)

Multi Detailed-level Coupling (low->high)

Low-resolution
Atmospheric model

Faster simulation time

High-resolution
Atmospheric model

Good at detailed local
weather

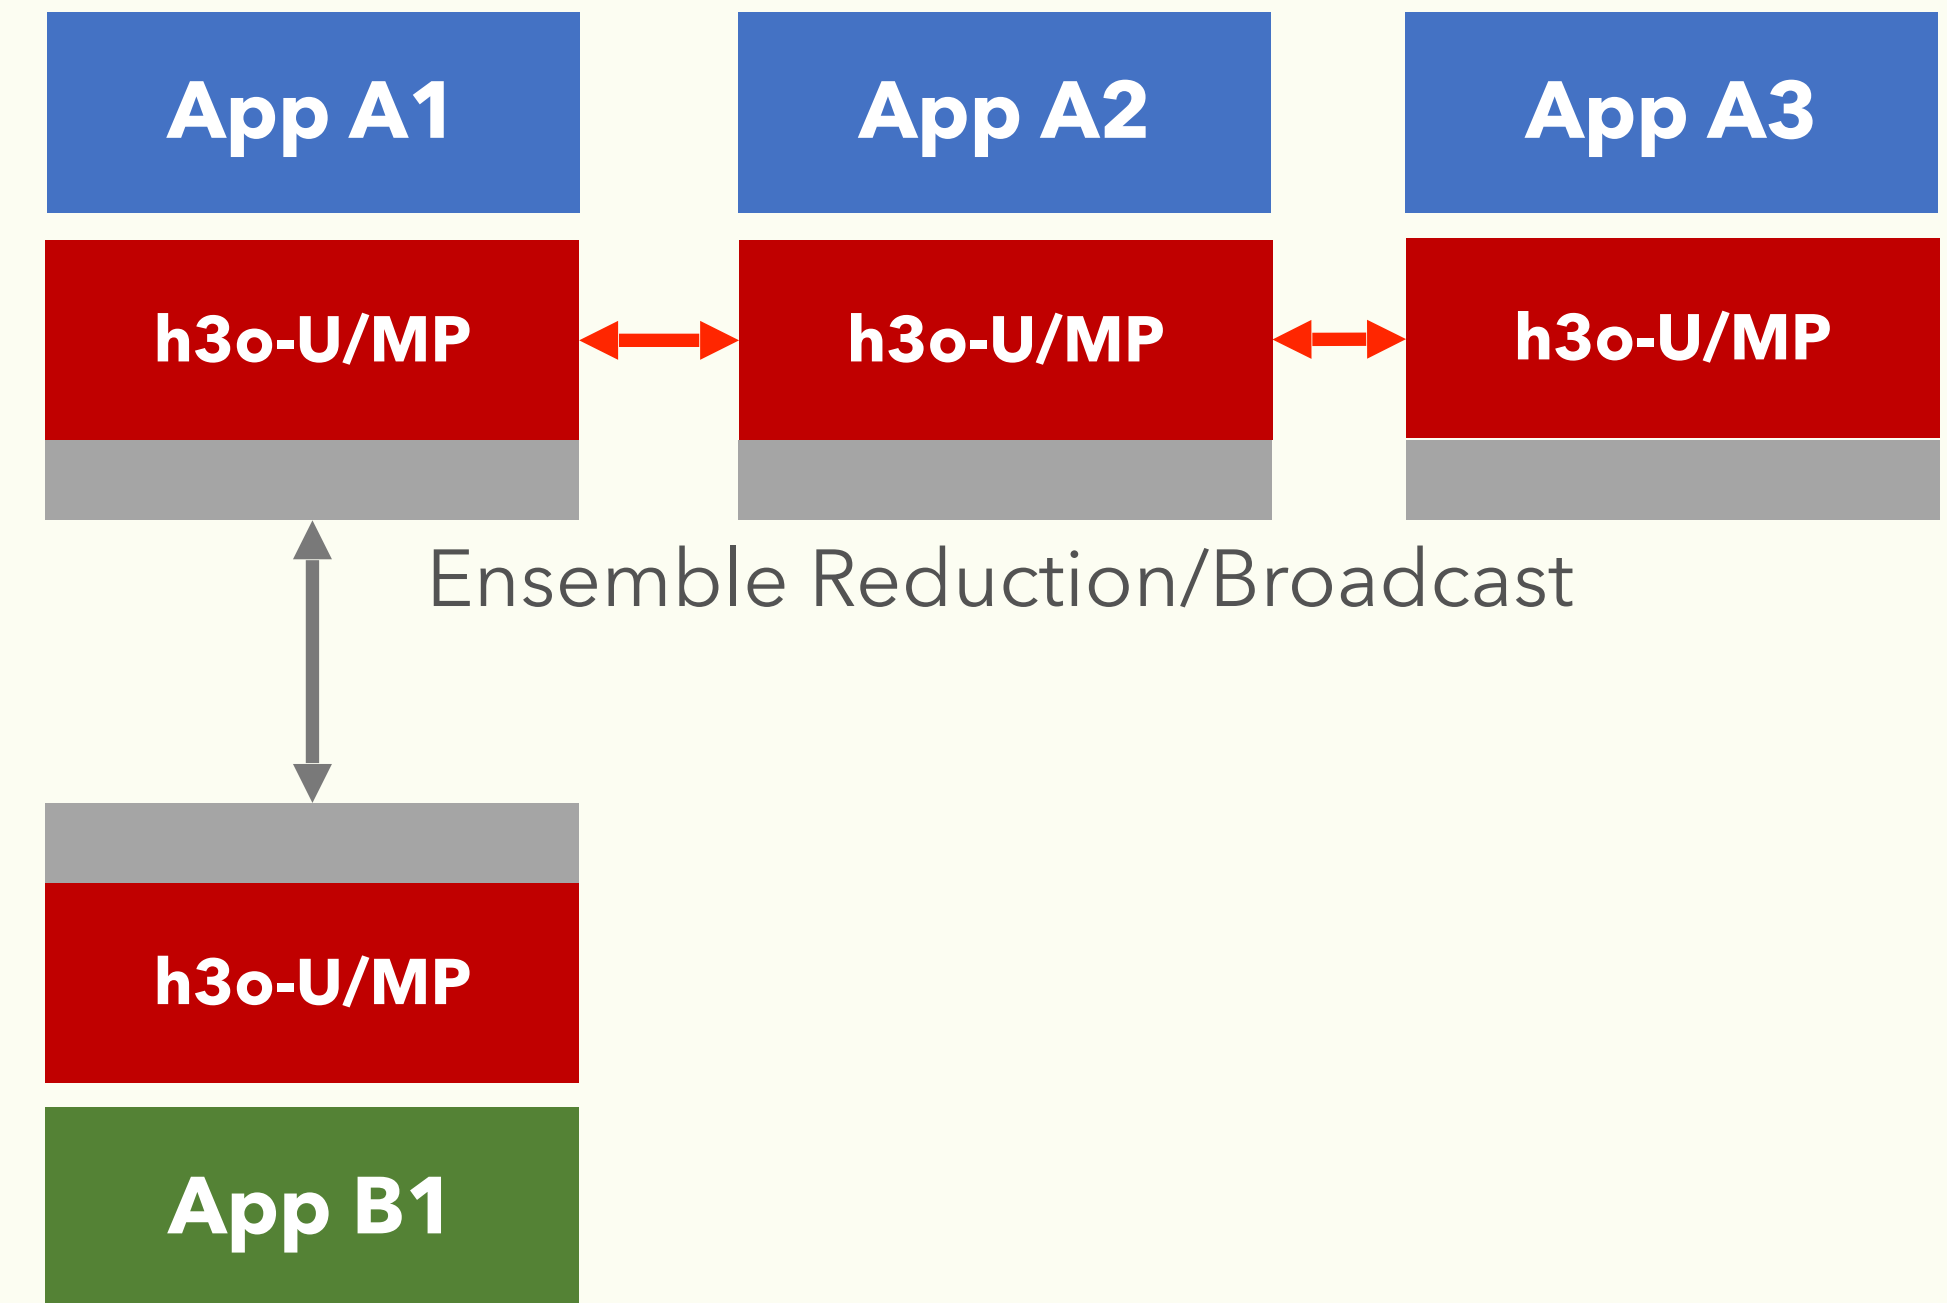

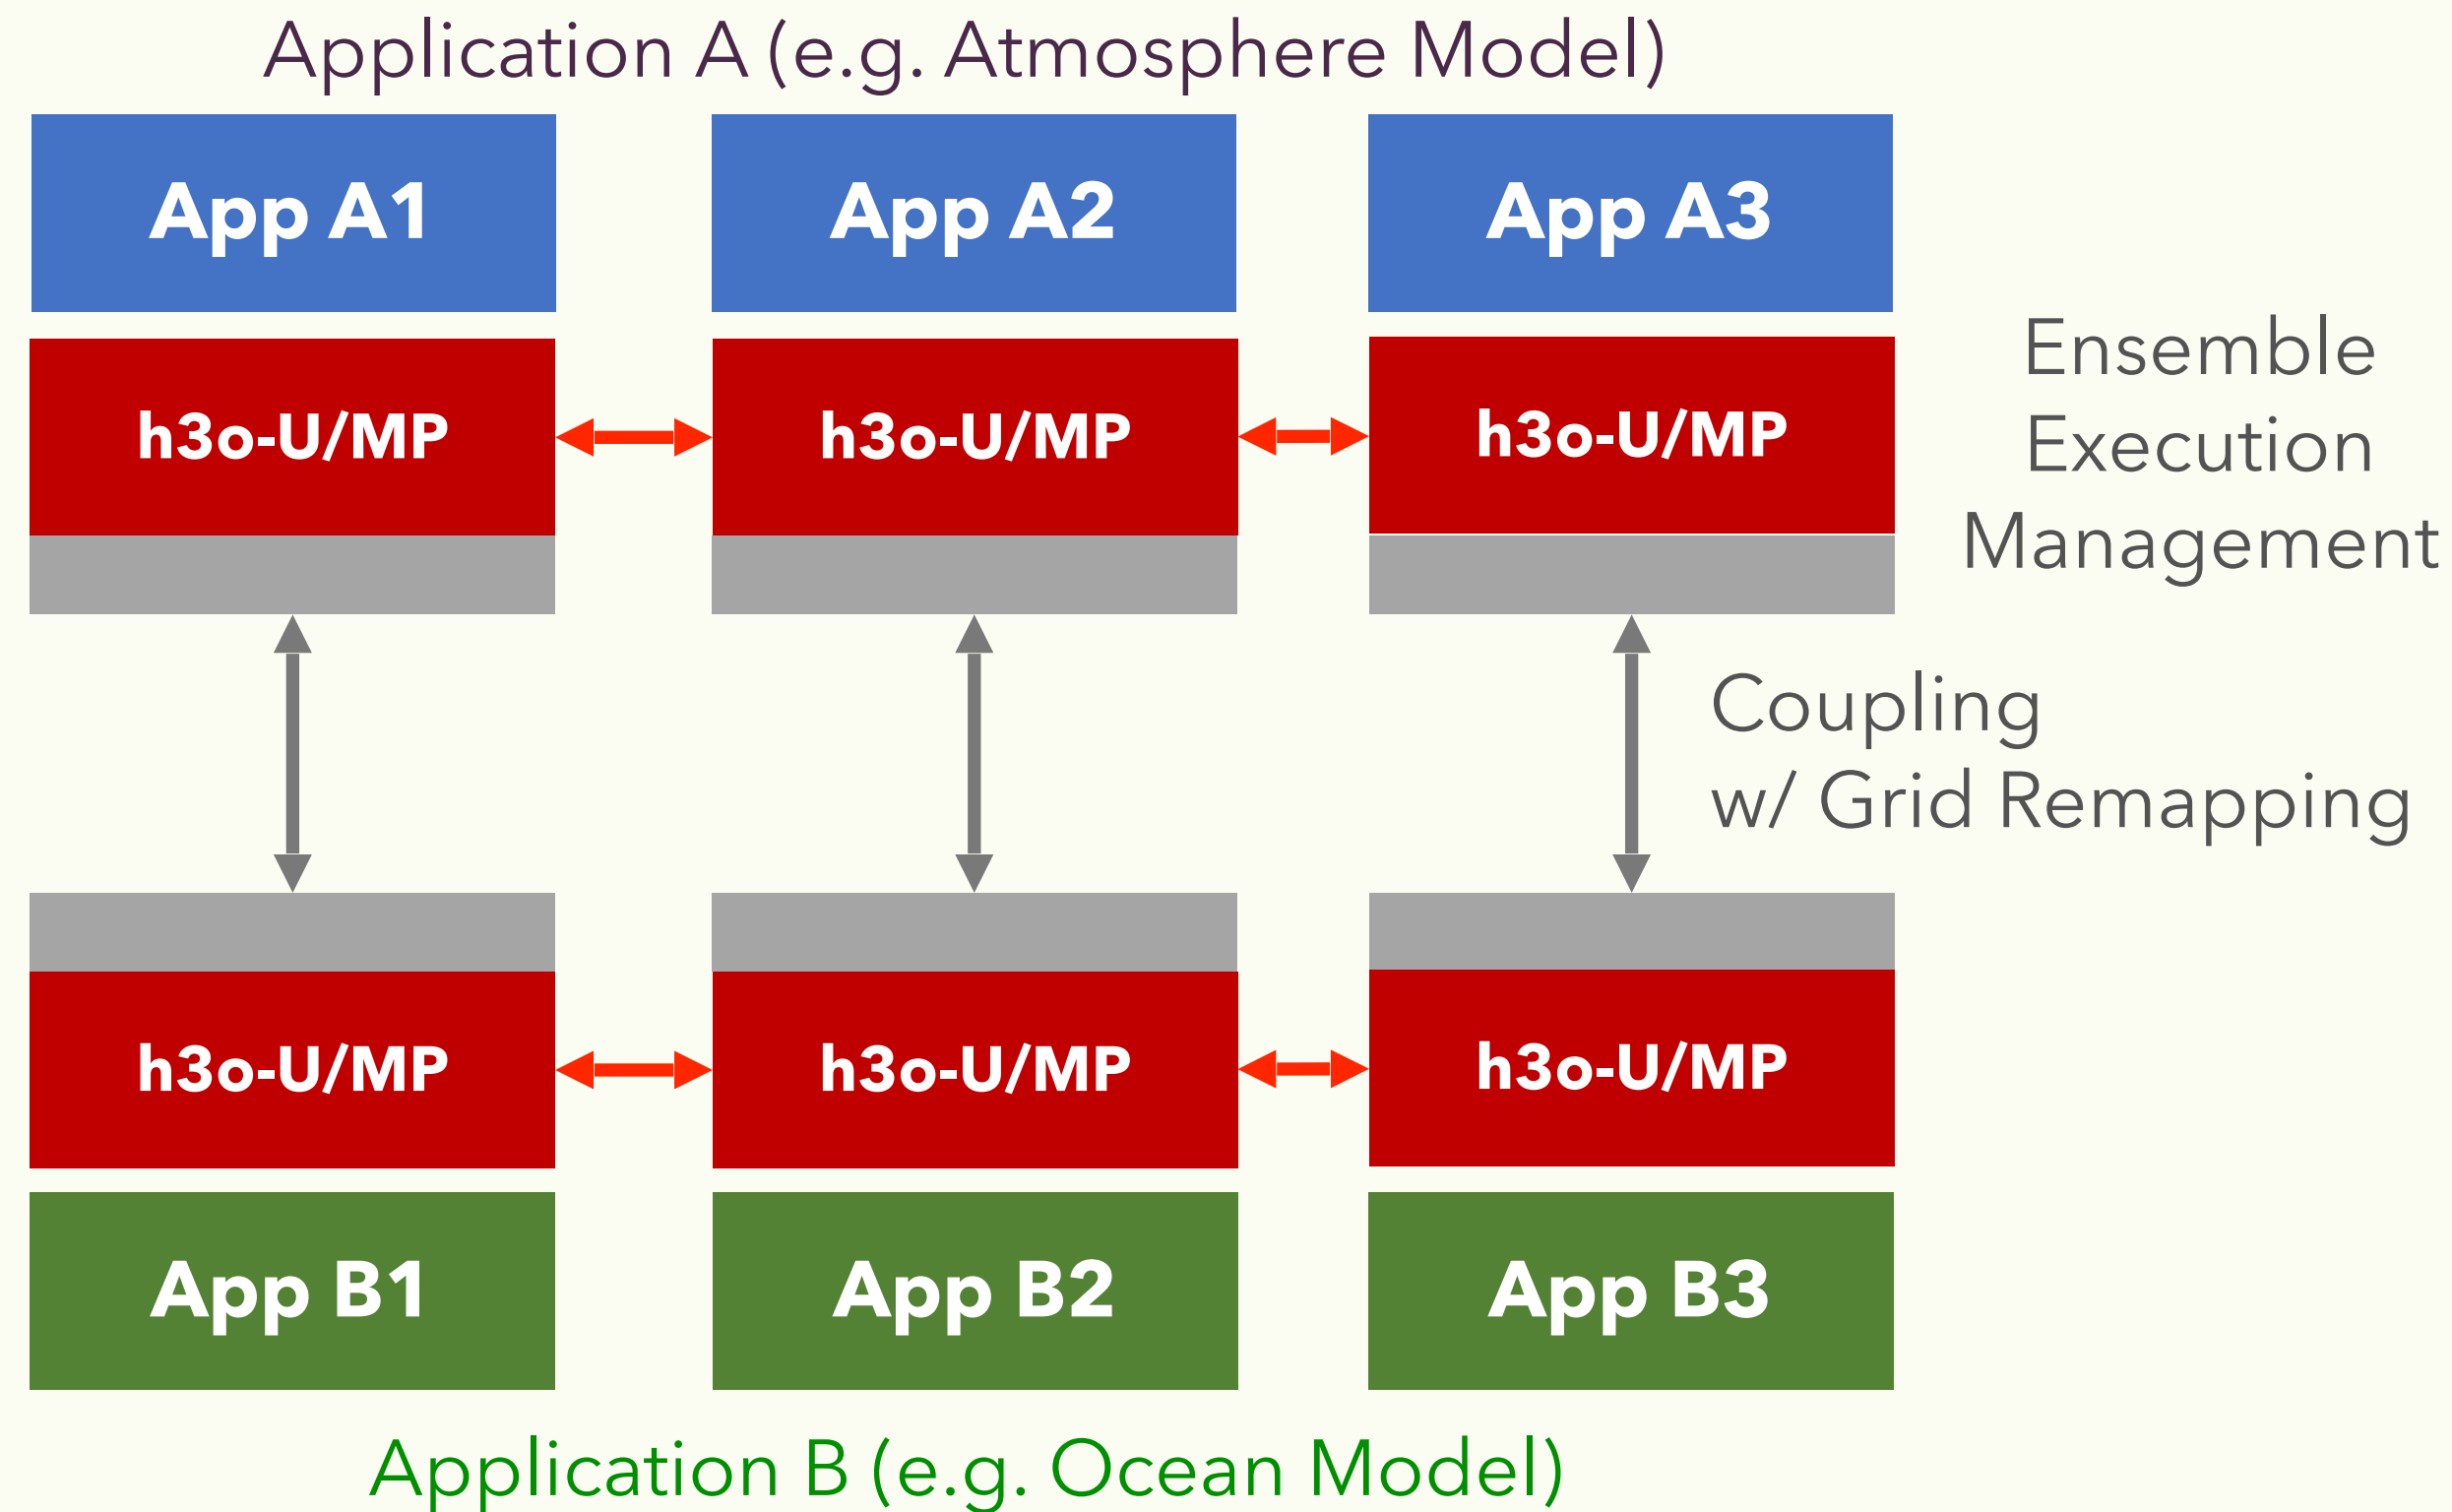

Coupling

Nudging large-scale (low-wavenumber) states

- If low-res simulations have some additional value in climatological reproducibility, it can be helpful for covering the weakness of high-res simulations

Ensemble Coupling

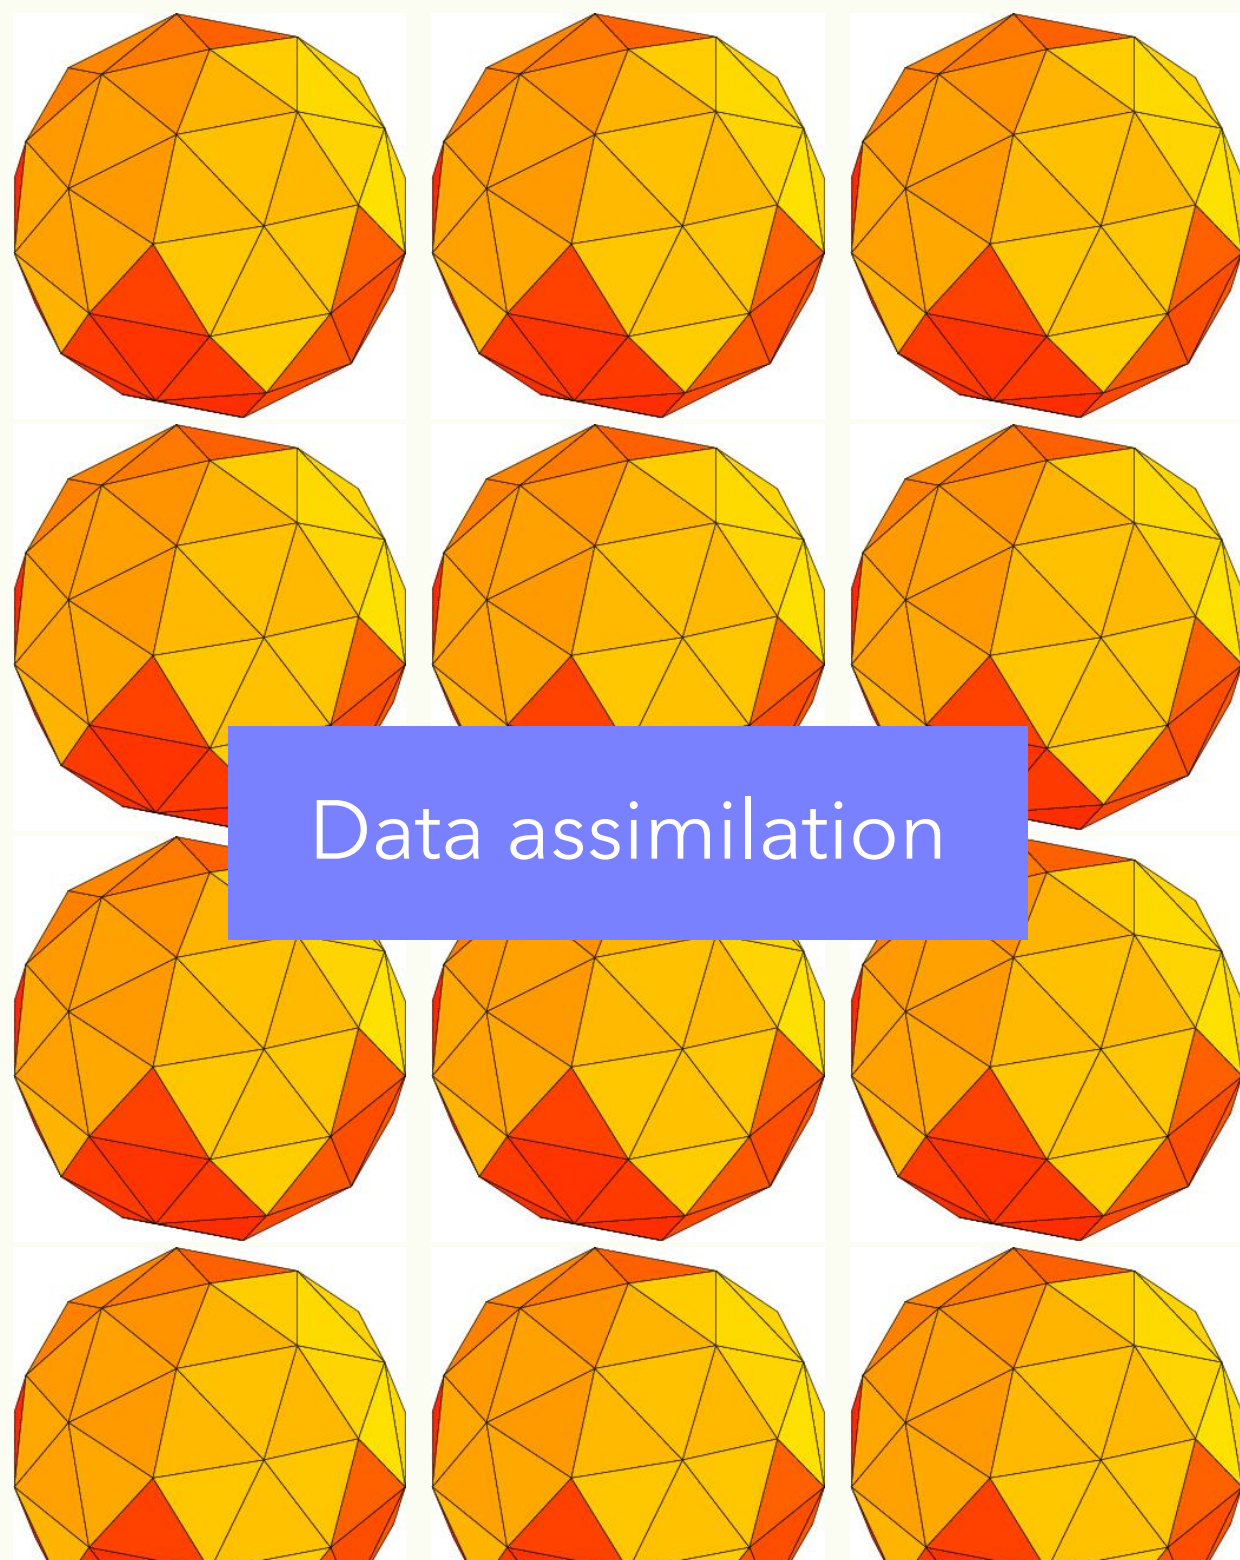

$M \times (A + B)$ execution

$(M \times A) + B$ execution

Challenges on Wisteria/BDEC-01(1)

Multi Detailed-level + Ensemble coupling

Low-resolution Ensemble

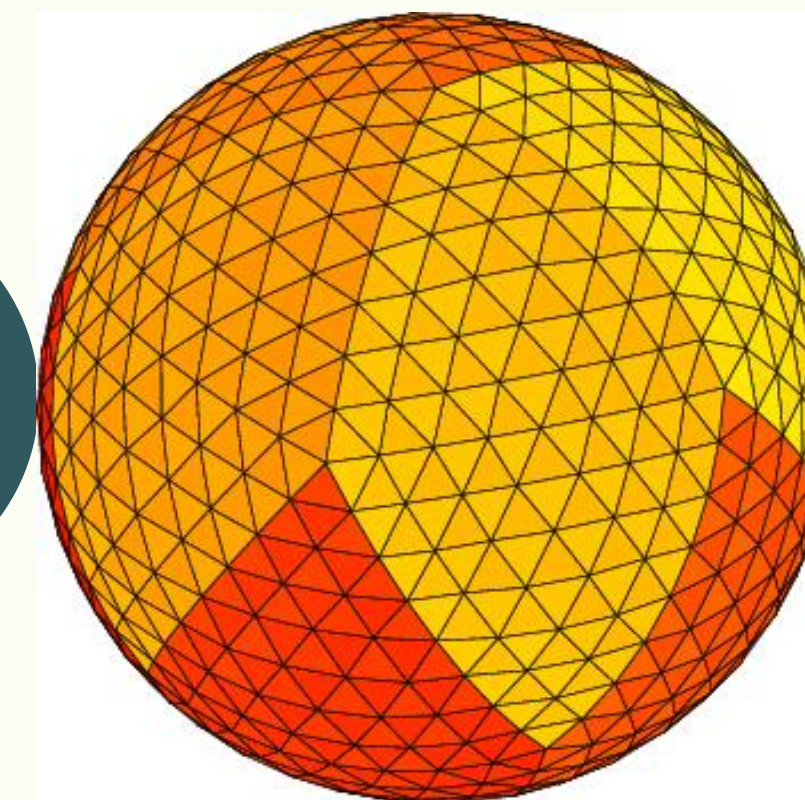

Data assimilation

Good at large-scale atmospheric state and climatology

Nudging large-scale (low-wavenumber) states

High-resolution

Good at detailed local weather

Faster than high-resolution ensemble data assimilation!

Multi Detailed-level Coupling (high->low)

Low-resolution
Atmospheric model

Light workload
Suitable to long-term simulation

High-resolution
Atmospheric model

Good at detailed local
weather

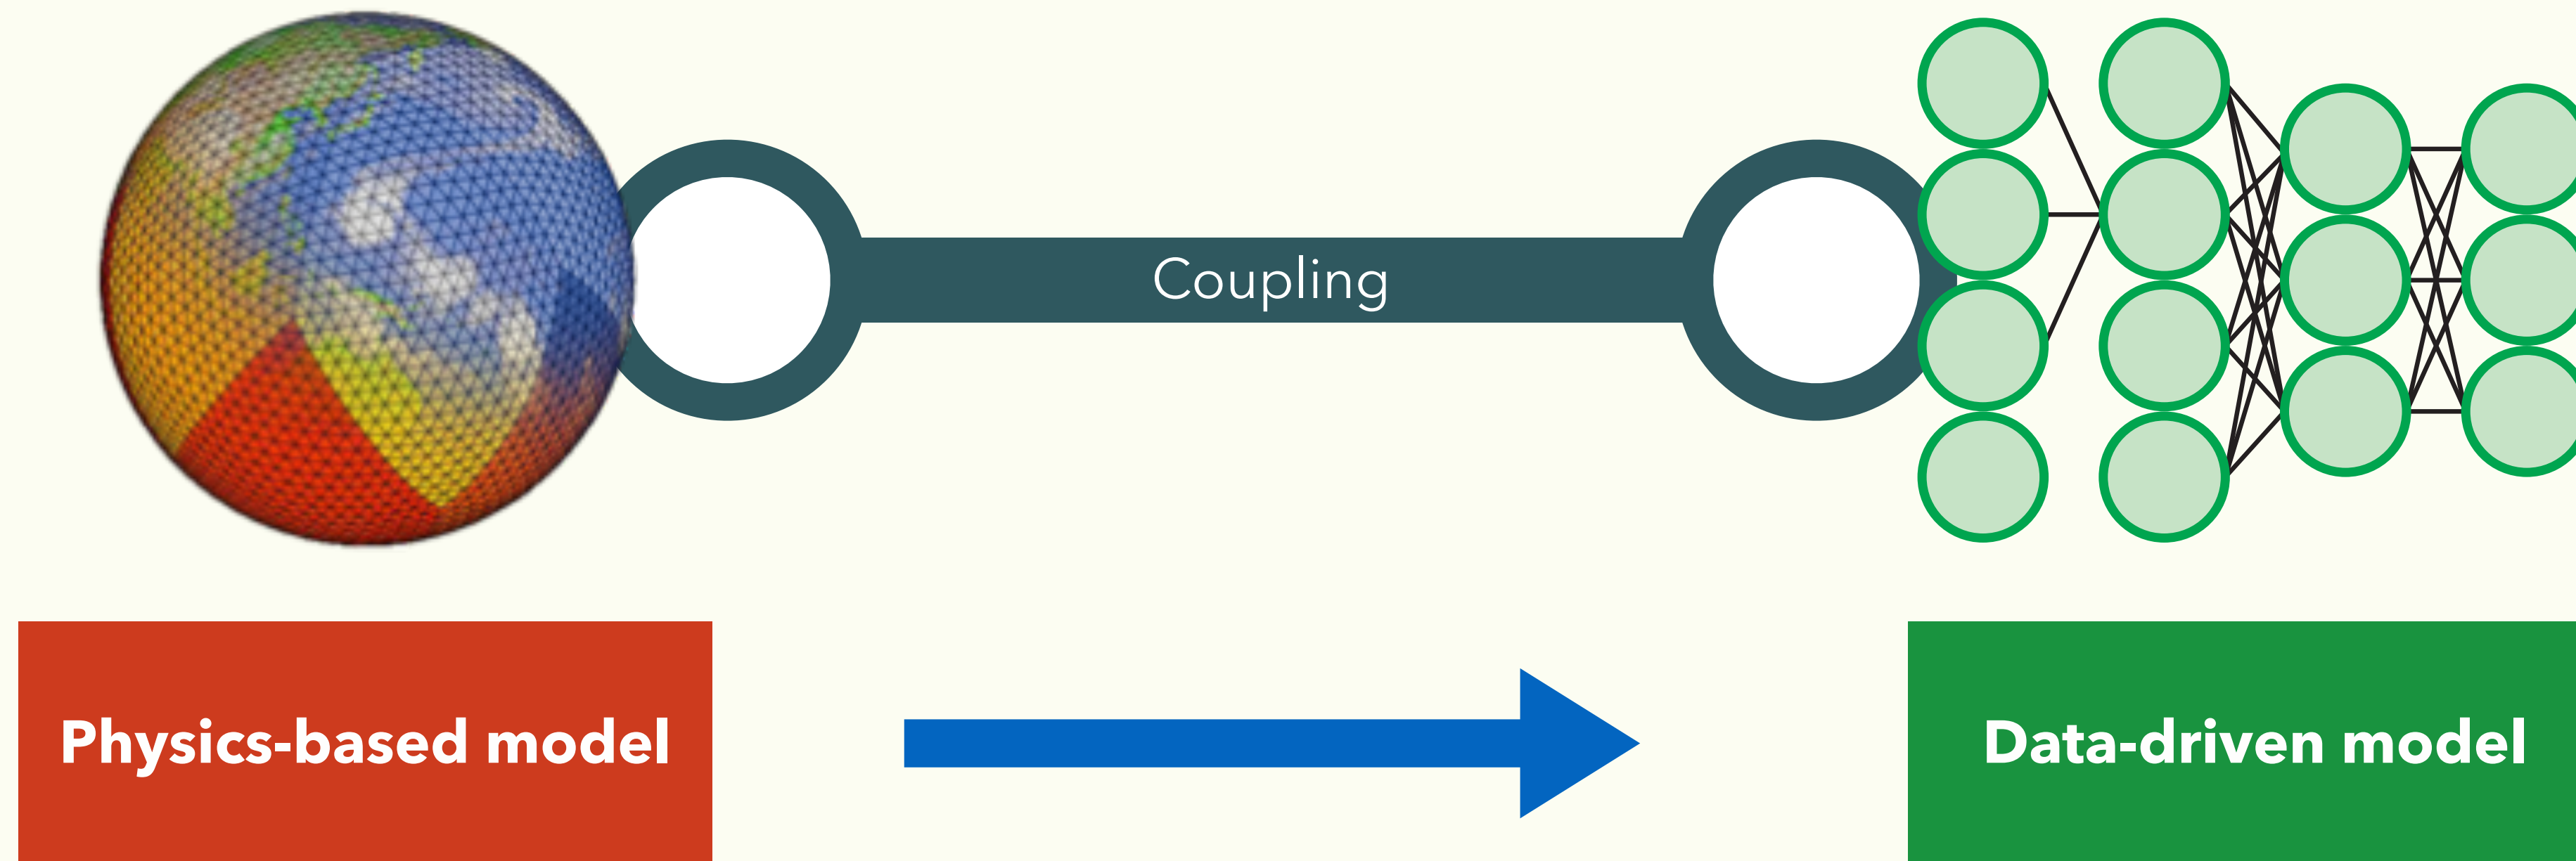

Coupling

Can we use the results of high-resolution
simulations to further reduce uncertainty?

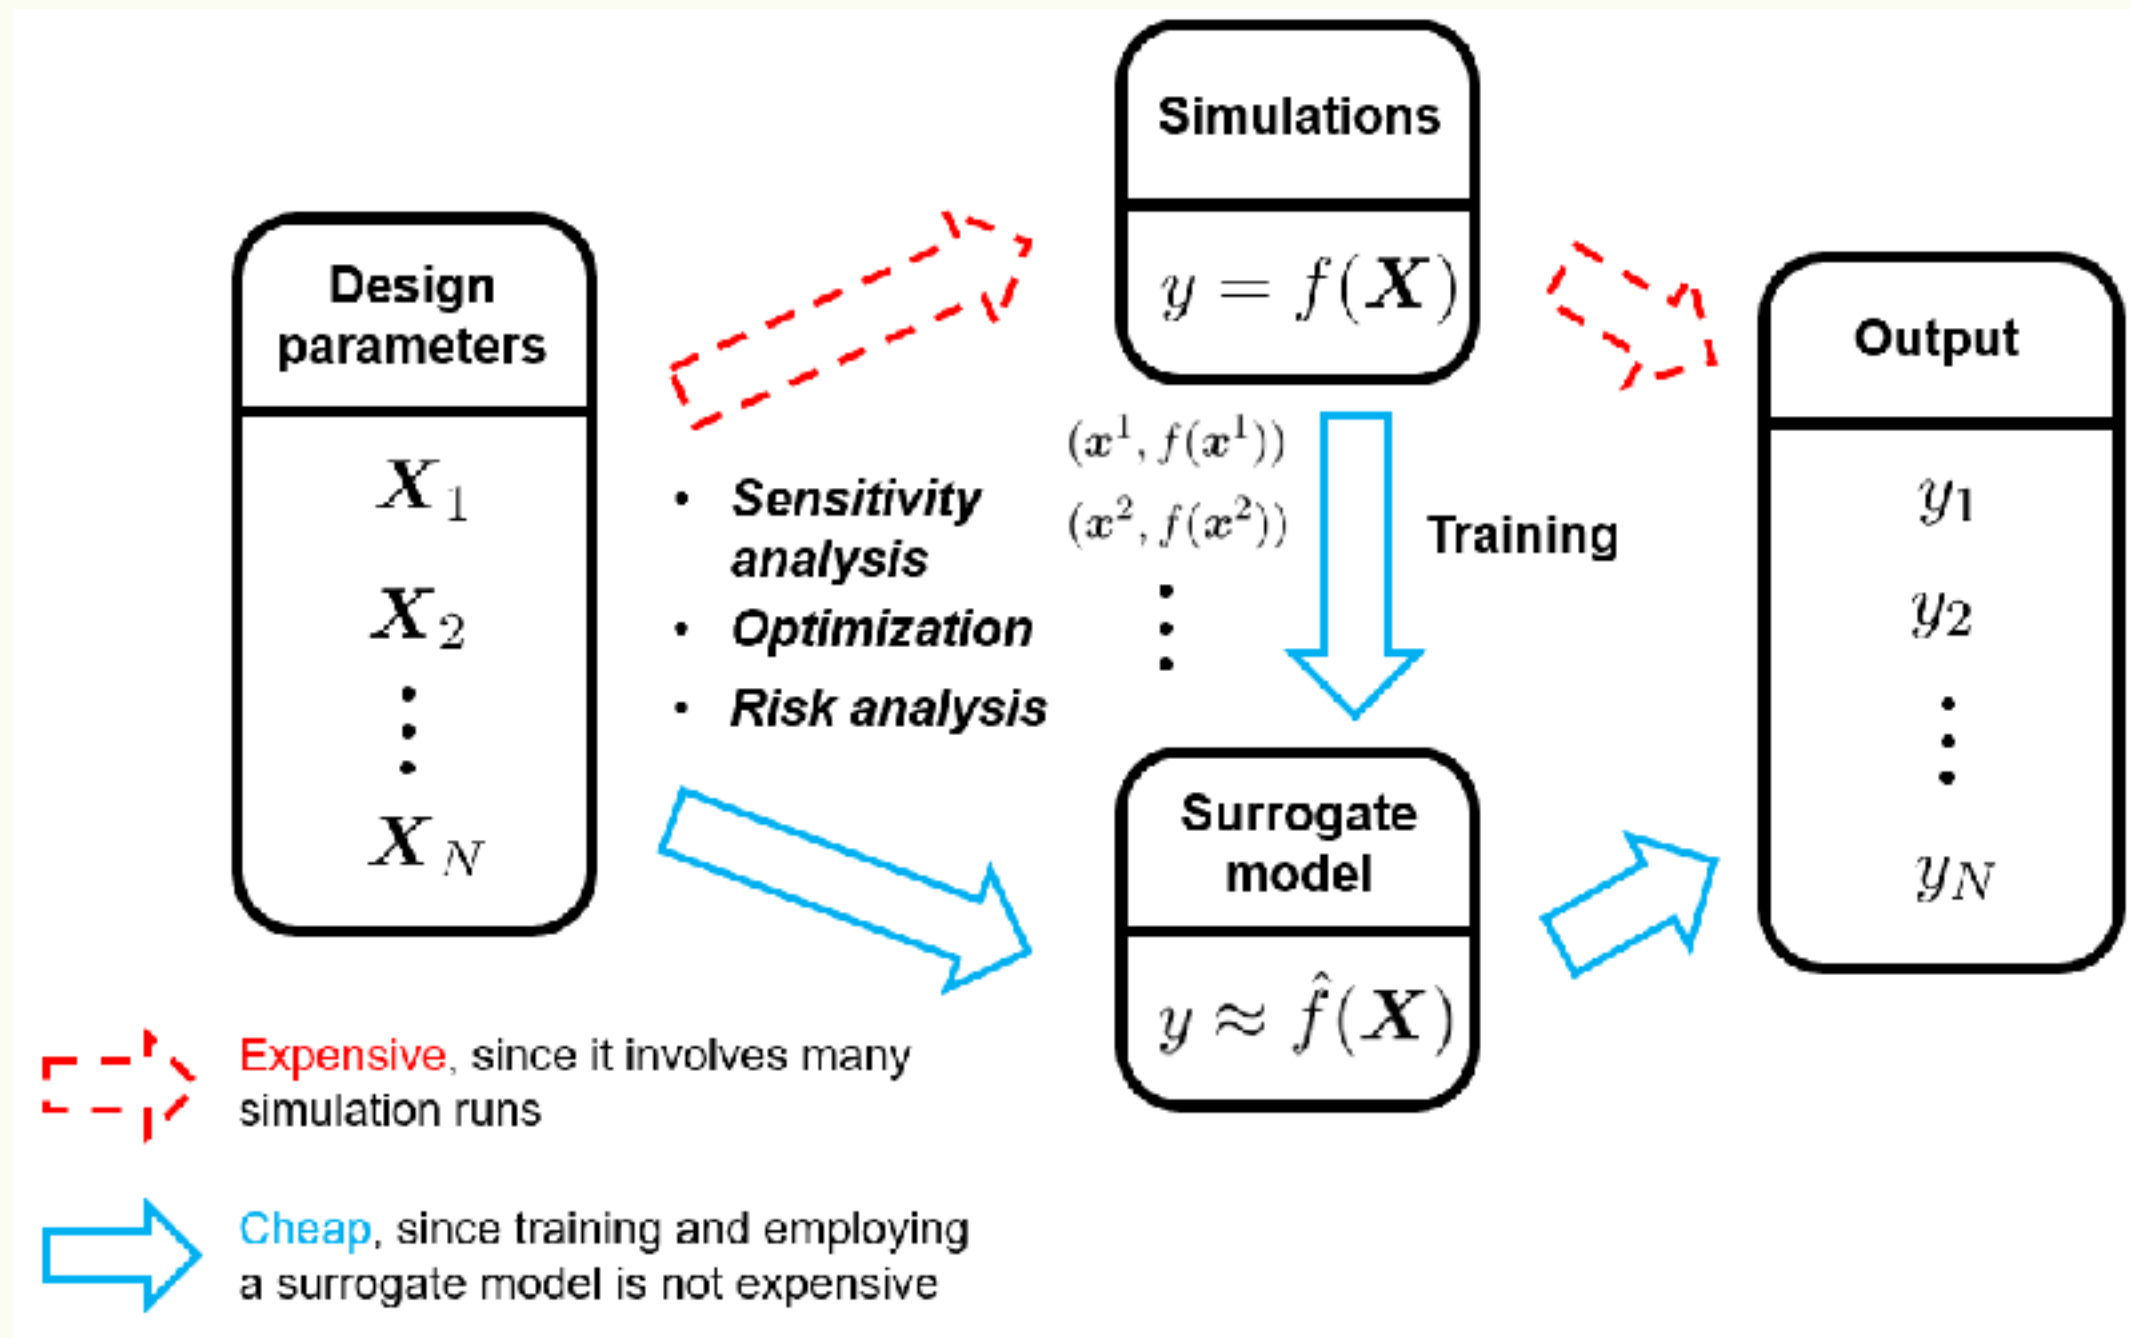

→ Let's train parameterized component models!

Multi Approach Coupling

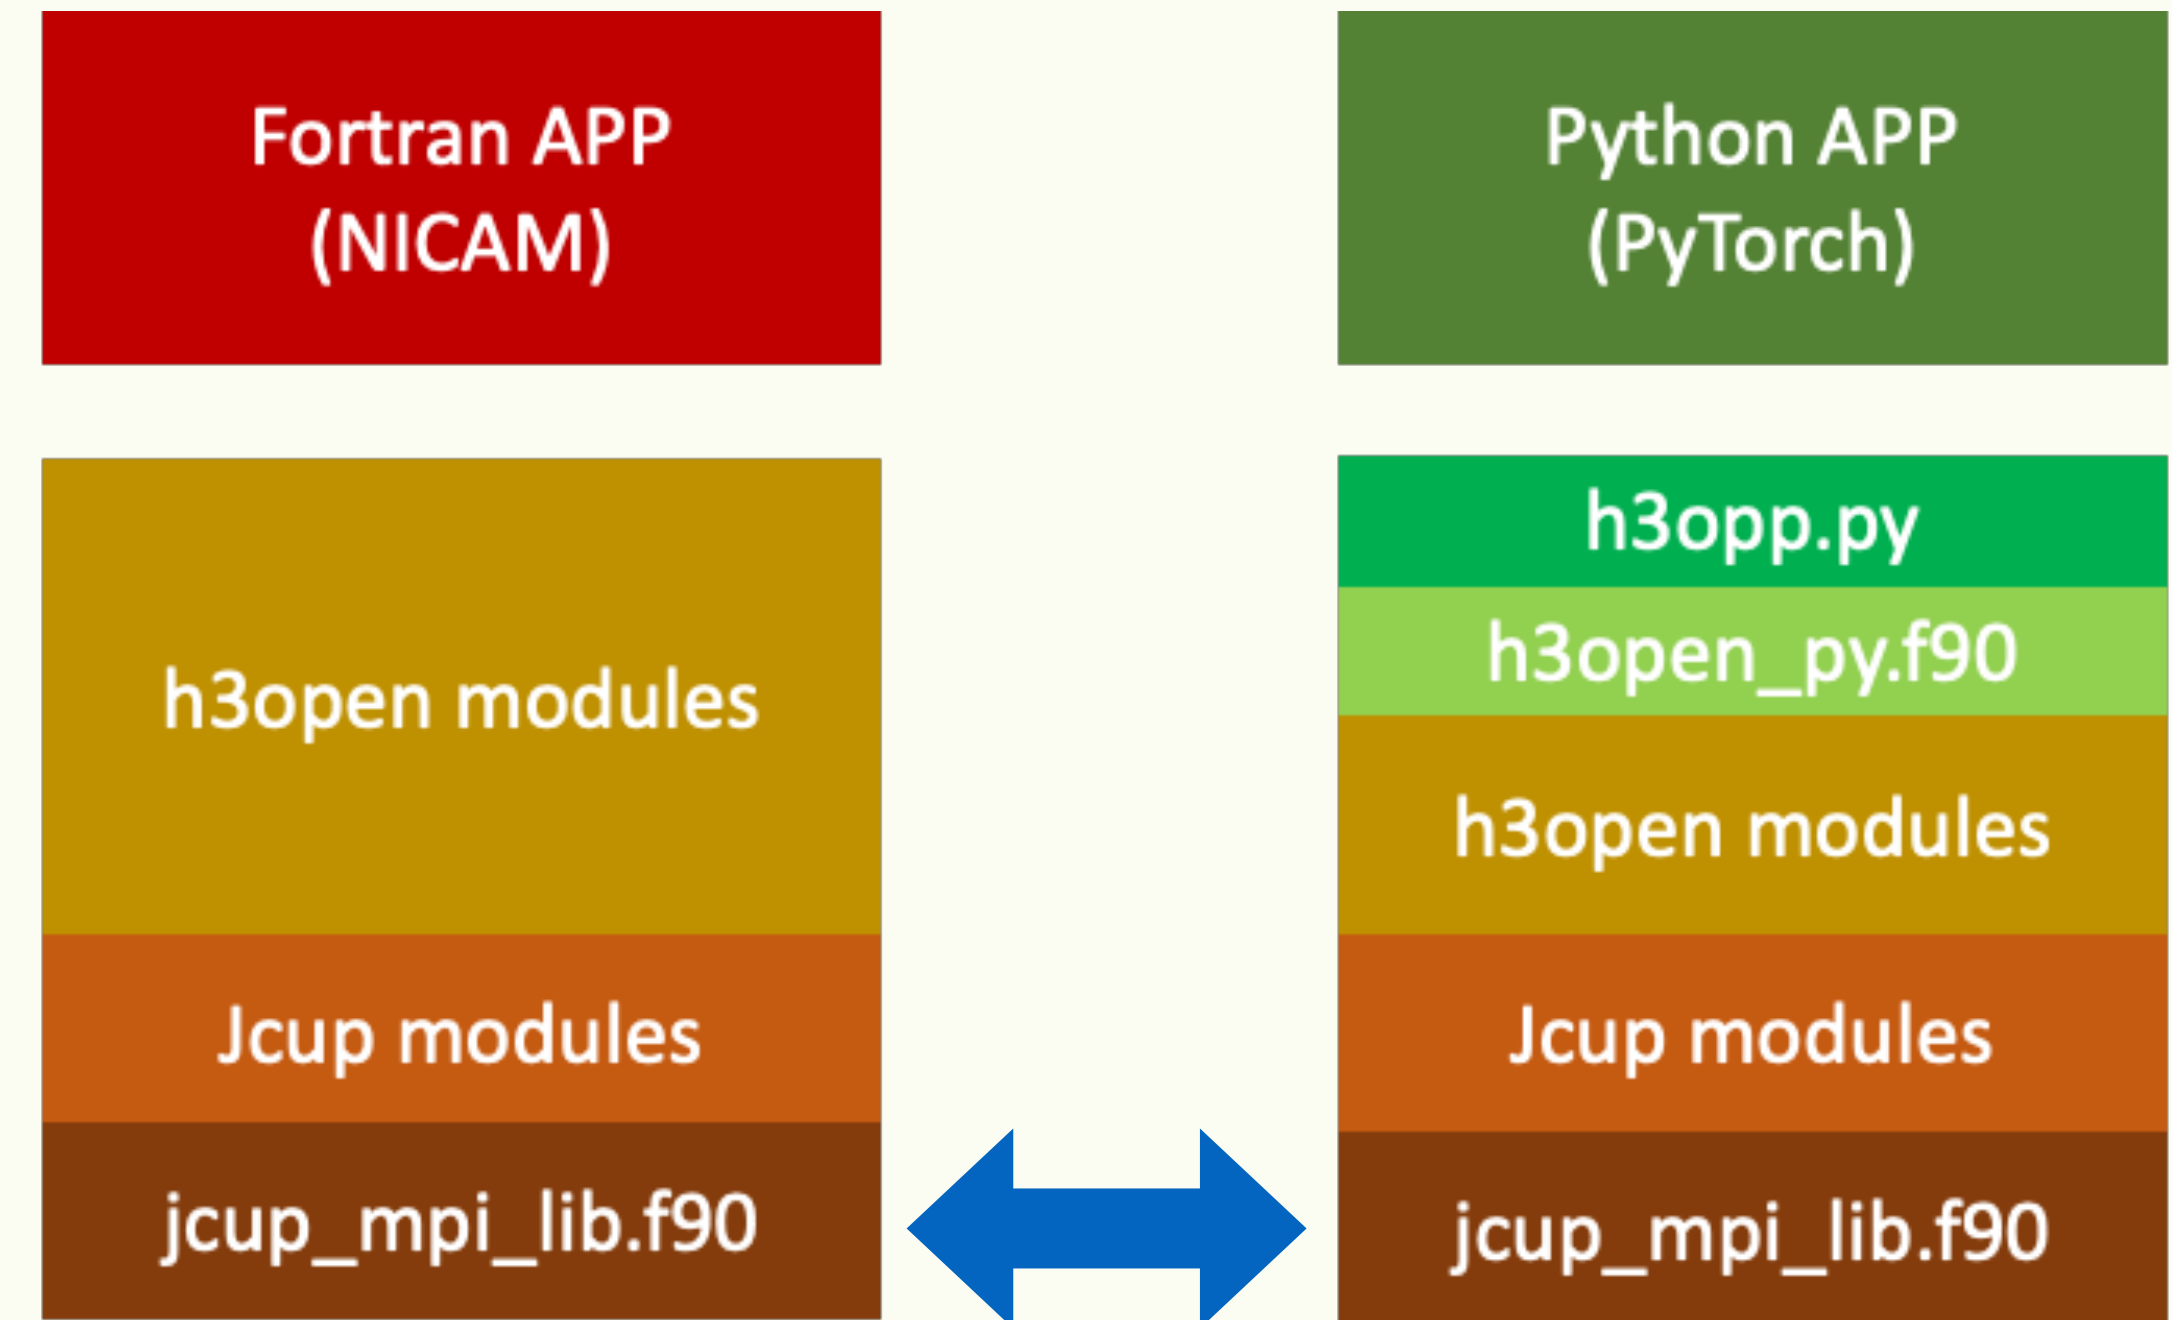

- Provide teaching data on-the-fly
- Plug-in to target component of the application
 - To make the surrogate model in the component-level
 - Gradual transition from physics-based models/legacy application

Multi Approach Coupling

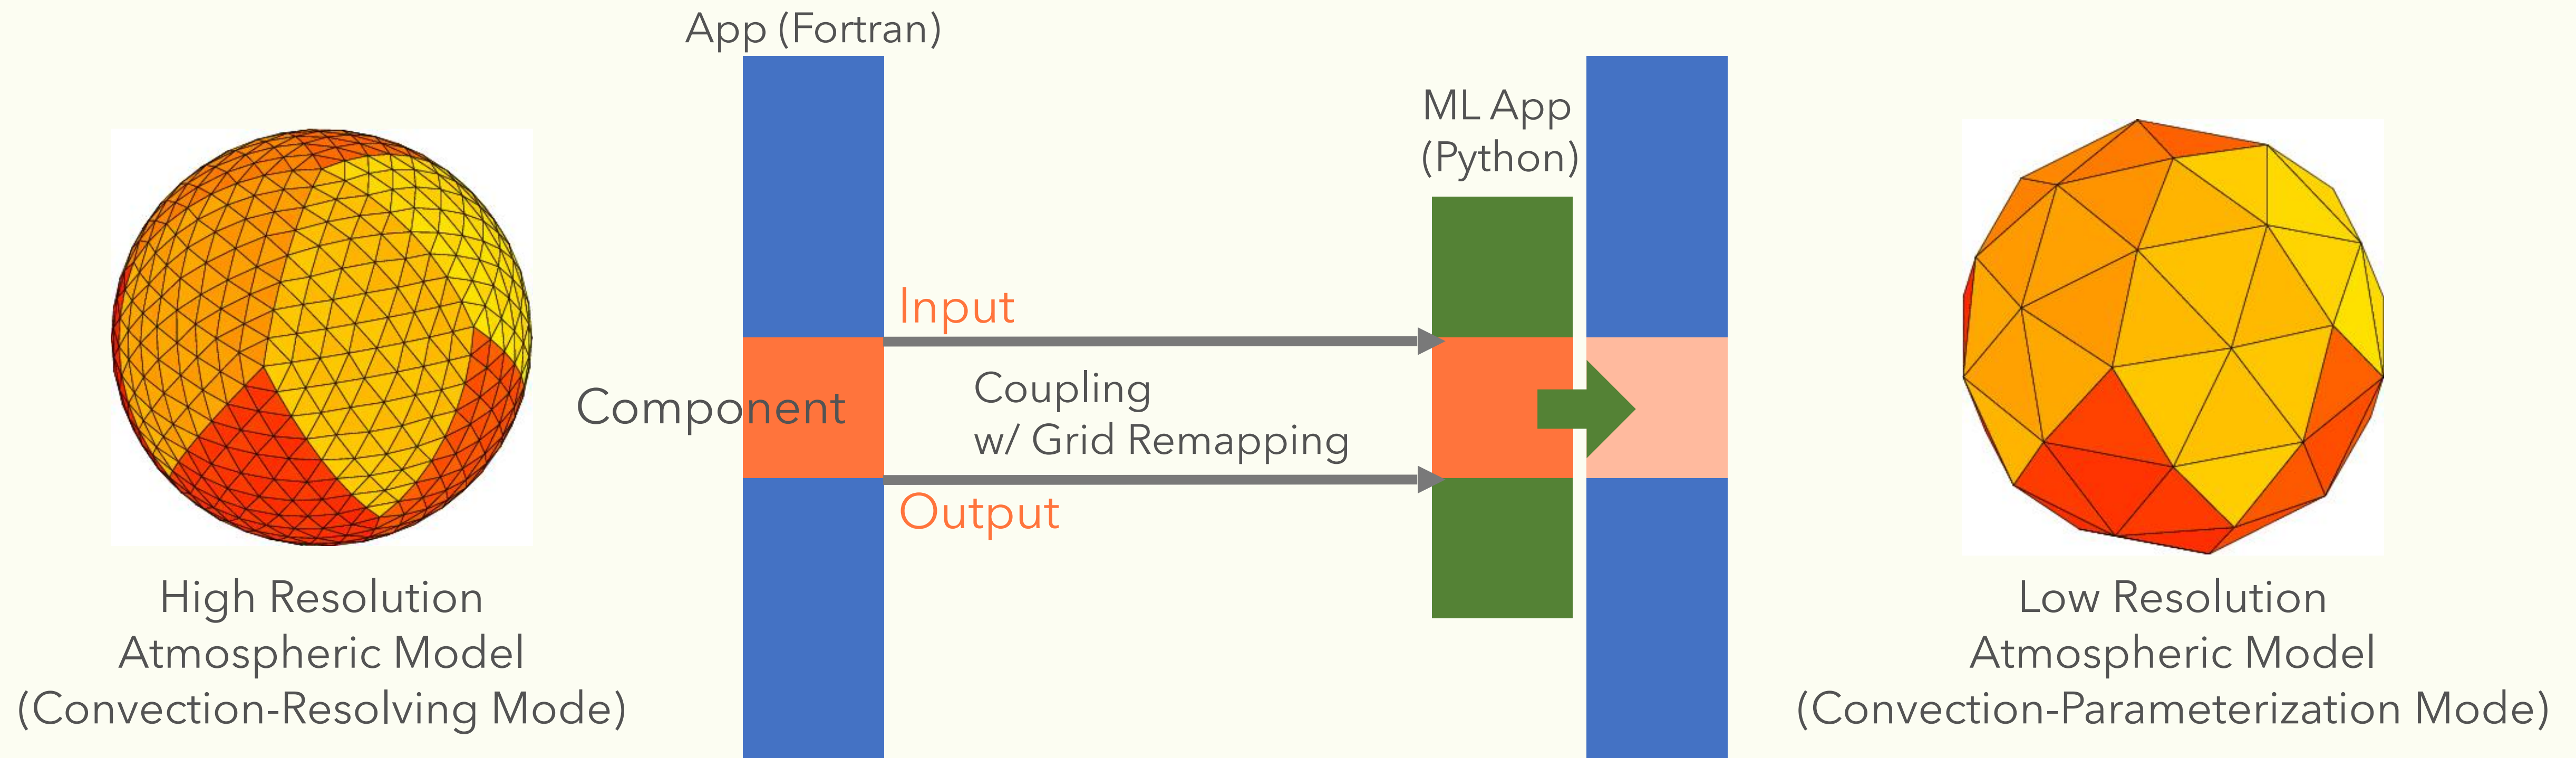

by Shuai Guo <https://towardsdatascience.com/>

- Coupling with a legacy fortran application and a modern python ML library

Challenges on Wisteria/BDEC-01(2)

Multi Detailed-level + Multi Approach

- Extract input/output datasets of the cloud microphysics component from high-res simulation
- Transfer datasets from high-res to low-res with spatial remapping
- Train NN with the coarse-grained high-res input/output datasets
- Then, trained NN is used as a cloud component (surrogate model) in low-res simulation

Temperature

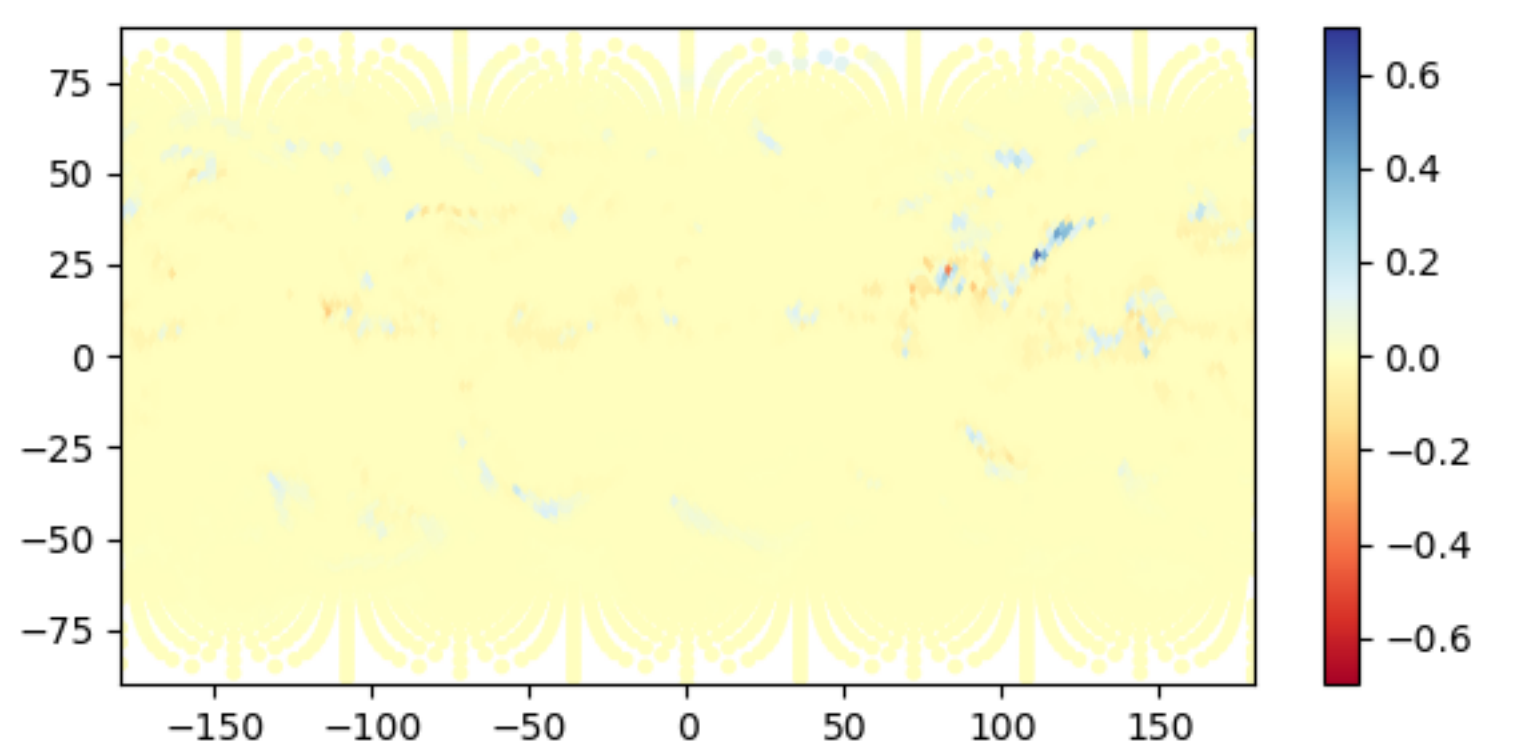

States

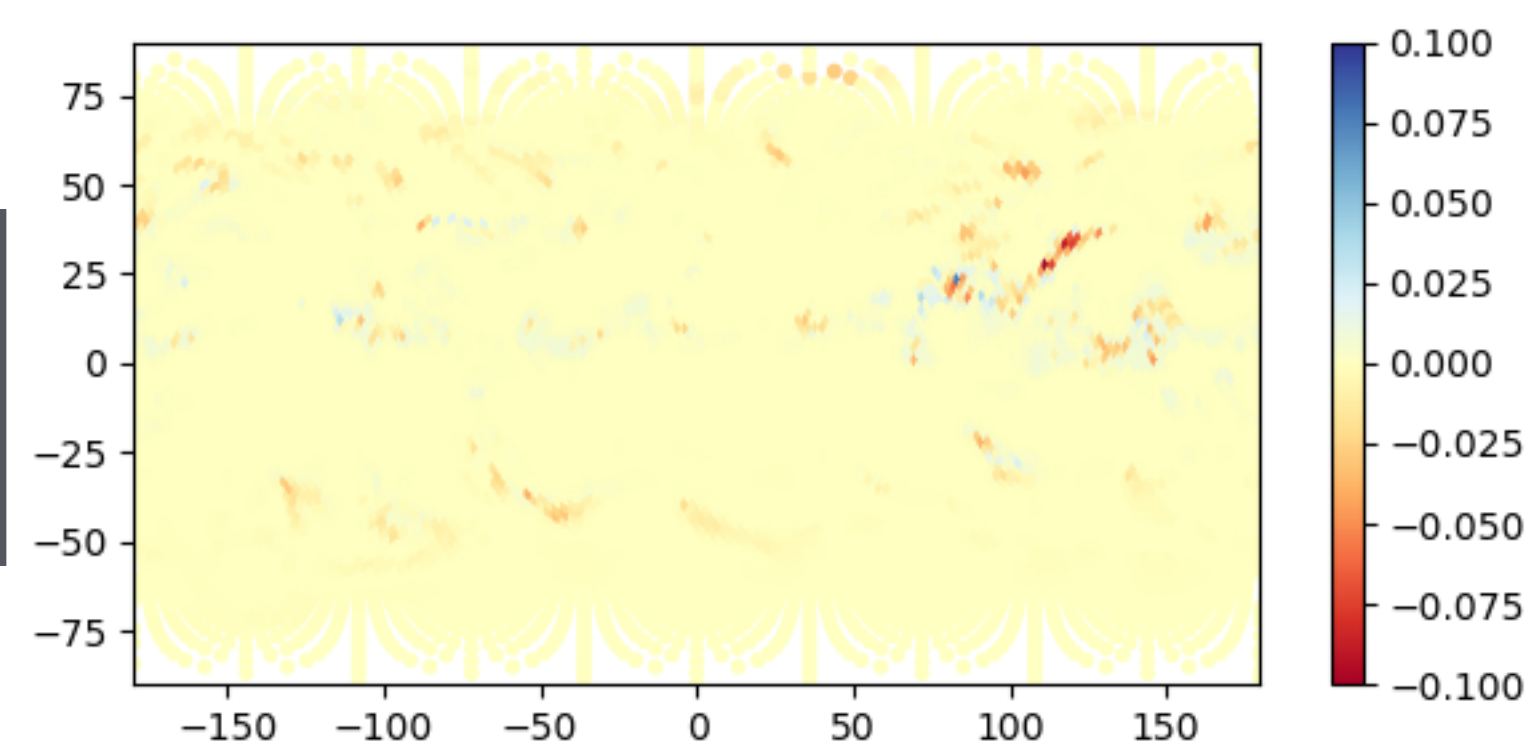

Water vapor

Tendency
(reference from
high-res)

Tendency
(predicted by NN)

Challenges on Wisteria/BDEC-01(3)

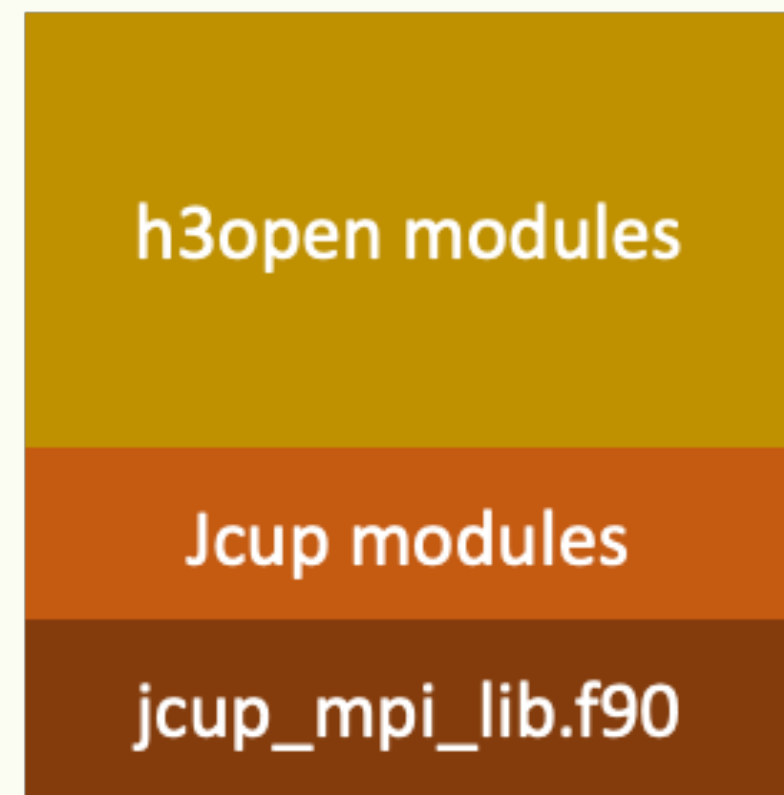

Multi Detailed-level + Multi Approach + Multi HPC System

Odyssey
Fujitsu FX1000 (A64fx)

Fortran APP
(NICAM)

Python APP
(PyTorch)

Aquarius
GPU cluster(A100)

MPI wrapper

MPI WaitIO MPI

MPI+WaitIO

- Collaboration with h3-Open-SYS/WaitIO (Next presentation)
- The application is unaware of whether the coupler is using MPI communication or WaitIO

Summary

A General purpose coupling library **h3-Open-UTIL/MP** enables;

- multi-physics coupling, simulation-IO coupling, ensemble coupling, multi detailed-level coupling, multi approach coupling
- legacy applications to integrate HPC + AI (S+L) step-by-step
- By using **h3-Open-SYS/WaitIO** together, users will be able to perform calculations using heterogeneous supercomputers easily

backup

A strong-scaling problem in the high resolution climate simulations

- Doubling the horizontal resolution increases the problem size by 8 times (4 times in the spatial direction and 2 times in the time direction)
- Process division is only in the spatial direction
- Difficult to extend simulation time for high-resolution climate simulation effectively, no matter how many processes are available

Toward breaking the wall of the high resolution climate simulations

ML-based Approximate computing + Parallel in Space&Time

- Poor convergence when PinST is performed using models with significantly different levels of detail
- Improving accuracy of low resolution models using AI
